Revision History

Date	Version	Author(s)	Description
17/03/2017	1.4.0	tekjau	Standardize all channel value to UPPERCASE and identical for both request and response and introduce versioning in URL, with latest version
03/09/2018	1.4.1	Hairi	Adding subMerchantID parameter for payment partner
04/11/2018	1.4.2	Hairi	Adding DirectDebit e-Mandate (DDA)
13/03/2019	1.4.3	Pik Yin	Adding TH DTB
01/07/2019	1.4.4	tekjau	Adding Razer Cash @ 99 Speedmart
05/07/2019	1.4.5	tekjau	Adding Razer Pay (e-wallet for MY/SG)
28/08/2020	1.4.6	Chen Yaau	Adding Thailand Credit Card channel.
16/10/2020	1.4.7	Chen Yaau	Adding optional parameters userAgent and appDeeplink.
27/10/2020	1.4.8	Adryn	Adding Razer Cash TH
24/11/2020	1.4.9	Khee Chieng	Adding Razer Cash @ KK Mart
23/12/2020	1.5.0	Shang Qin	Updating Malaysia CC channel
07/01/2021	1.5.1	Chen Yaau	Adding ShopeePay (e-wallet for MY)
02/04/2021	1.5.2	Firdaus Shukor	Adding new eNETS integration
07/04/2021	1.5.3	Firdaus Shukor	Adding FPX Agrobank
23/07/2021	1.5.4	Huey Fen	Adding Singapore PayNow
24/08/2021	1.5.5	TJ	Replace FQDN with Razer's domain
27/08/2021	1.5.6	Chen Yaau	Adding Installment channel details
28/09/2021	1.5.7	Huey Fen	Adding UnionPay
03/11/2021	1.5.8	Firdaus	Adding Crypto TripleA
22/11/2021	1.5.9	Suk Wah	Adding IOU Pay (BNPL)
14/12/2021	1.6.0	Safwan	Adding RPP DuitNowand Alipay+
22/02/2022	1.6.1	Firdaus	Adding LinePay TH

Cont. Revision History

21/04/2022	1.6.2	Adryn	Adding Direct Card Scheme Channel
22/04/2022	1.6.3	Azzatul	Adding Atome, GCash
05/05/2022	1.6.4	Choo Yao Song	Adding 9PAY VN
07/06/2022	1.6.5	CY	Adding Alipay+ supported wallet, TNG MiniApp
15/06/2022	1.6.6	Firdaus	Adding DOKU ID
25/07/2022	1.6.7	Adryn	Adding Worldwide Card Channel
09/08/2022	1.6.8	SQ	Adding Apple Pay
26/09/2022	1.6.9	SQ	Add new request parameters (ApplePay,GooglePay,ECI,TOKEN_TYPE,Cryptogram,LAST4,CheckoutSource)
11/09/2022	1.6.10	Jian Kai	Adding BPI PHI
13/01/2023	1.6.11	SQ	Add new request parameters - dsTransID,OSType,OriginalTransID,DisplayName,PreDiscountAmt,MerchantInitiated,3DS_version Add new Method values - mini,inwallet Add new mpstokenstatus values - 3,4 Add Card encryption method
19/01/2023	1.6.12	SukWah	Add Card Installment Channel (CIMB-eBPG, HLB-MPGS)
25/01/2023	1.6.13	Hafeez, SQ	Add PaymentExpirationTime & 3DS_version
24/02/2023	1.6.14	SQ	Add CREDITAH for MyDebit CNP UCOF, Recurring
01/03/2023	1.6.15	SQ	Add failedURL request parameter
18/04/2023	1.6.16	SukWah, SQ	Add Affin Card Acquiring Add newMethod value - terminal
12/06/2023	1.6.17	SukWah	Add RHB Card Acquiring
13/06/2023	1.6.18	Firdaus	Remove DOKU IB channels
14/06/2023	1.6.19	SQ	Add Google Pay
12/07/2023	1.6.20	SQ	Add OriginalSchemeTransID
13/07/2023	1.6.21	Choo Yao Song	Add FPX Bank Of China

01/08/2023	1.6.22	SQ	Add MerchantInitiatedReason in the request parameter
28/08/2023	1.6.23	Choo Yao Song	Add ShopBack
13/03/2024	1.6.24	Firdaus	- Add E2Pay channels - Remove DOKU channels
24/04/2024	1.6.25	Hafeez	- Add PayNet CheckOut
25/04/2024	1.6.26	Firdaus	- Remove Citibank from eNETS
14/06/2024	1.6.27	Hafeez	- More PayNet CheckOut (PNCO)
18/06/2024	1.6.28	Firdaus	- Add TW ESUN IcpMemberId in payment request
01/07/2024	1.7.0	SQ Shuhailey	- Add new TxnType. STANDALONE_CAPT (Standalone capture) - Add new request parameter - AuthCode - TOKEN_CRYPTOGAM - Add idempotence request validation
16/08/2024	1.7.1	SukWah	- Add new card installment channel
18/09/2024	1.7.2	Safwan	- Add PayMaya-eWallet, PayMaya QRPH, AUB Instapay and AUB QRPH channel
26/09/2024	1.7.3	Choo Yao Song	- Change ShopBack from BNPL to E-Wallet
23/10/2024	1.7.4	KC	- Remove TxnType RECURRING, STANDALONE_CAPT
25/10/2024	1.7.5	Farhani	- Add Grab SG, PH
03/03/2025	1.7.6	Adryn	- Update token data type
06/03/2025	1.7.7	Izmal	- Add Cash via Cosway

Introduction

Direct Server API allows merchants to initiate payment requests through post data. Merchant will redirect the customer/user based on the url response back to the merchant site. Merchant will be required to initiate direct status inquiry once user redirects from channel to merchant application.

If a merchant is to obtain credit card data directly from the buyer (not entering on bank or the payment gateway hosted page or URL), then the merchant must be **PCI-DSS** compliant in order to proceed. Otherwise assessment fee might be imposed by the brands, i.e. Visa or MasterCard.

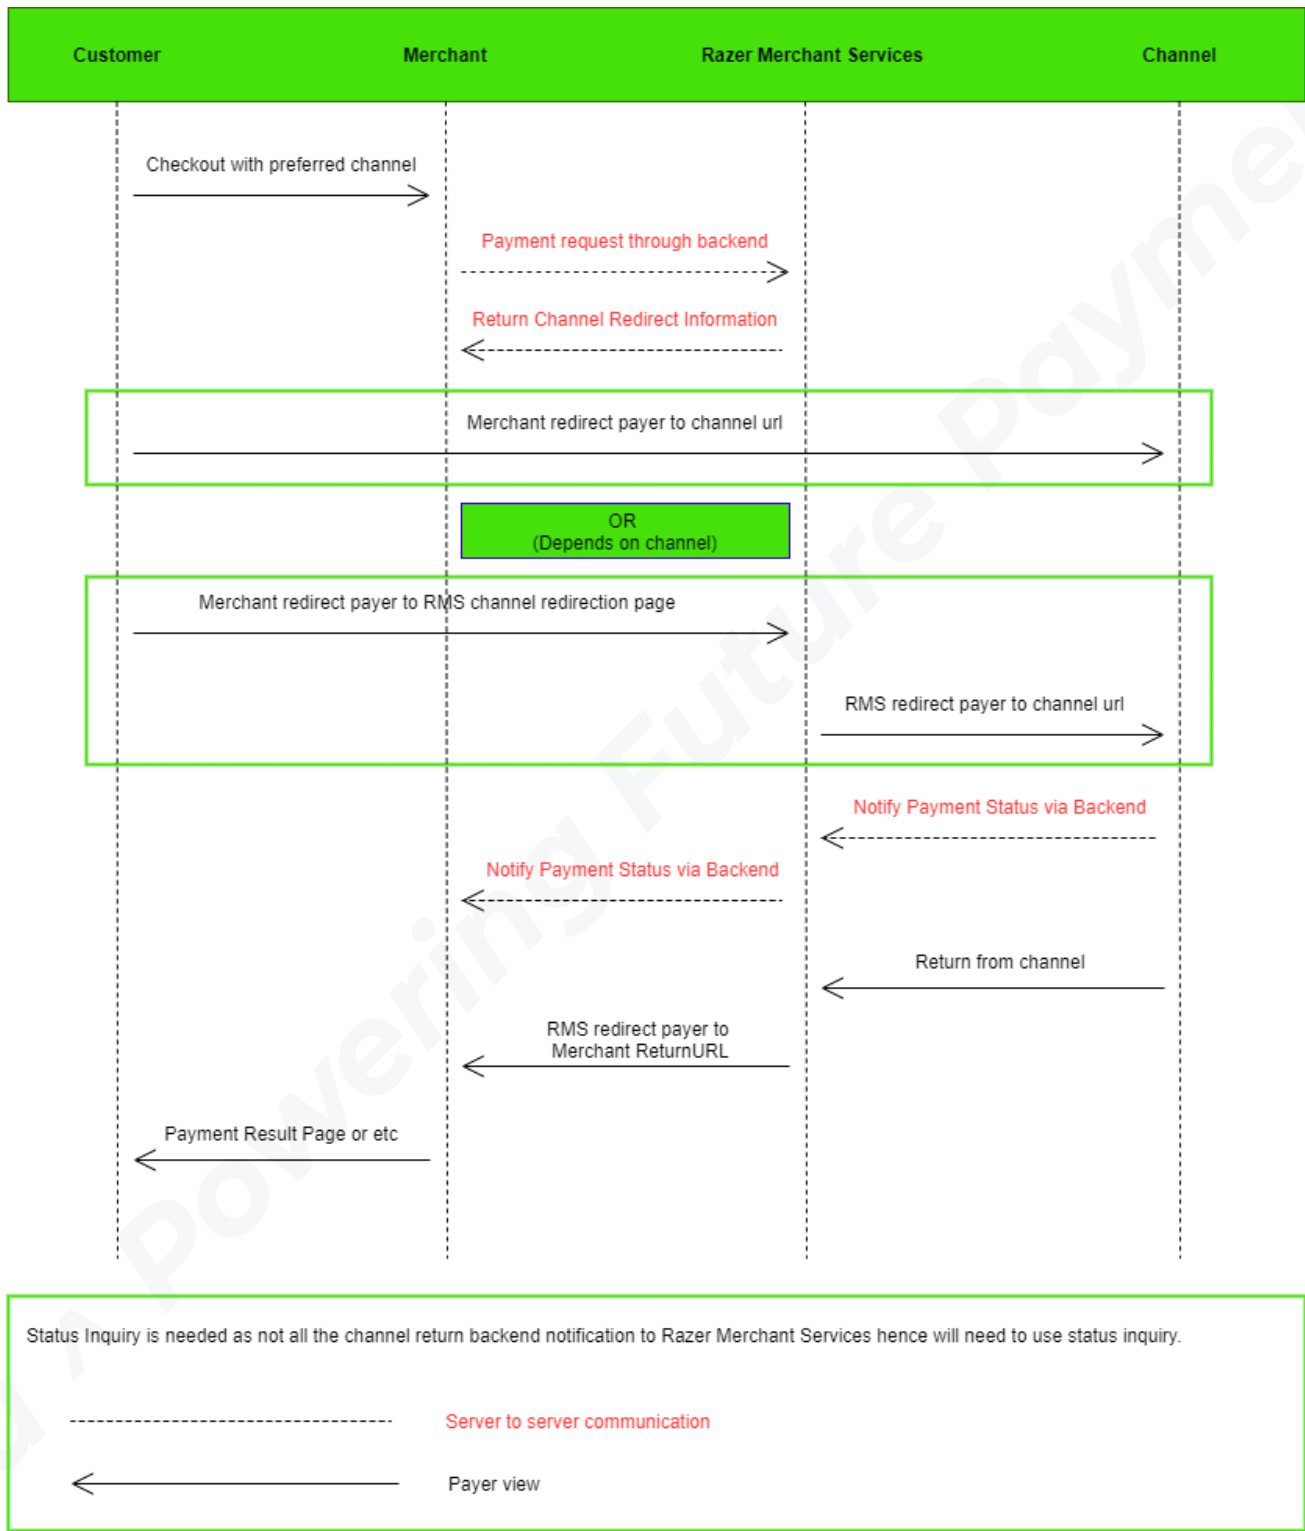

This is a server-to-server call API that merchants or developers will have more control on the checkout experience and need to manage on the frontend user interface. Improper integration might cause higher drop rate on the channel.

The other 2 integration methods are:

- 1) Hosted payment page: implementation guide can be found in official API
- 2) Seamless Integration: it is in between server-to-server request and hosted page, channel page is prompt to the buyer using JavaScript snippet code from GitHub

For payment status notification, payment status query, and other functional API calls, please refer to the official API document.

Direct Server API Flow

Idempotence Request

Idempotency allows you to retry a request multiple times while only performing the action once. This helps avoid unwanted duplication in case of failures and retries. For example, in the case of a timeout error, it is possible to safely retry sending the same API payment call multiple times with the guarantee that the payment detail will only be charged once.

The accounting rules in the PG take care of most potential double-processing issues that can impact payment modifications. To minimize unwanted side effects when requests are duplicated.

Implement idempotency

To submit a request for idempotent processing, include an idempotency-key:<key> in the request header.

The <key> should be a unique identifier for the message, with a maximum length of 64 characters (including symbols). We recommend using a version 4 (random) UUID, or GUID, ULID. If you don't receive a response (e.g., due to a timeout), you can safely retry the request with the same HTTP header. If the PG has already processed the request, the response from the first attempt will be returned without duplication.

To verify that a request was processed idempotently, check the idempotency-key HTTP header in the response.

Sample Request Header

Key	Type Format / Max Length	Description / Example
idempotence-key	ans{1..64}	Any alphanumeric character, ULID, GUID, or UUIDv4 e.g. d4fa5b34-306e-47b6-88ee-9104b918375b

Payment Request Parameters (Merchant to PG)

Merchant sends HTTPs POST payment request parameter to the payment gateway.

REQUEST URL: <https://pay.fiuu.com/RMS/API/Direct/1.4.0/index.php>

or

Latest version <https://pay.fiuu.com/RMS/API/Direct/latest/index.php>

Parameter Name	Data Type (Size)	M/O/C	Description
MerchantID	ans{1..32}	M	Merchant ID provided by PG
ReferenceNo	ans{1..40}	M	Merchant Unique Transaction / Order / Billing / Reference No. Allowed symbols are - (dash) and _ (underscore)
TxnType	a{4}	M	SALS AUTS (Please inform support@fiuu.com in advanced before starting using pre-auth payment, extra costs incurred and the hold credit will be auto-released if not captured on time) MOTO
TxnChannel	ans{0..30}	M	(Refer to Appendix C)
TxnChannelExt	ans{1..128}	O	Parameters that will be sent to channel gateway (Refer to Channel API Spec). Must be in key:value format. Separated by comma (,) Eg: "param1:value1,param2:value2"
TxnCurrency	a{3}	M	ISO4217 currency code, eg. "MYR", "THB", "IDR"
TxnAmount	ns{10,2}	M	Transaction amount or maximum DirectDebit amount eg."1.00", 2 decimal points only and comma(,) is not allowed
CustName	ans(1..128)	O	Customer name. (Merchant can request it as mandatory upon request. Please email your request to support@fiuu.com)
CustEmail	ans(1..128)	O	Customer email. (Merchant can request it as mandatory upon request. Please email your request to support@fiuu.com)
CustContact	ans(1..32)	O	Customer contact no. (Merchant can request it as mandatory upon request. Please email your request to support@fiuu.com)
CustDesc	ans{1..200}	O	Customer/Merchant description. For Taiwan payment channel, please refer to the Guideline for Taiwan channels .
Signature	ans(1..32)	M	md5(TxnAmount.MerchantID.ReferenceNo.Verifykey)
ReturnURL	ans{1..200}	O	Merchant payment response page (message via browser). [Allowed domain only] For mobile flag, use "mobile:/" (for RMS mobile XDK only)
NotificationURL	ans{1..200}	O	Merchant notification URL endpoint
CallbackURL	ans{1..200}	O	Merchant callback URL endpoint
FailedURL	ans{1..200}	O	Merchant failed URL endpoint. If this is passed, ReturnURL endpoint

			will only be redirected for successful transaction. Whereas FailedURL endpoint will be redirected for failed transaction only.												
CC_PAN	n{15..16}	O	For credit-channel only. Credit-card number. (Except CREDITW) ** If not incur to pass plain text .Refer to Card data encryption section for encryption method.												
CC_CVV2	n{3..4}	O	For credit-channel only. Credit-card CVV (Except CREDITW) ** If not incur to pass plain text .Refer to Card data encryption section for encryption method												
CC_MONTH	n{2}	O	For credit-channel only. Valid Month (Except CREDITW) ** If not incur to pass plain text .Refer to Card data encryption section for encryption method												
CC_YEAR	n{4}	O	For credit-channel only. Valid Year (Except CREDITW) ** If not incur to pass plain text .Refer to Card data encryption section for encryption method												
CC_TOKEN	ans{16..50}	O	Token for credit card or DPAN												
TOKEN_TYPE	a{1...20}	C	GooglePay,ApplePay,MDES,VTS												
ECI	ans{2}	C	Electronic Commerce Indicator (ECI) is a value returned by Directory Servers (namely Visa, MasterCard, JCB, and American Express) indicating the outcome of authentication attempted on transactions enforced by 3DS. Eg : <table><tr><td>Mastercard</td><td>Visa</td><td>MyDebit</td></tr><tr><td>02</td><td>05</td><td>15</td></tr><tr><td>01</td><td>06</td><td>16</td></tr><tr><td>00</td><td>07</td><td>17</td></tr></table>	Mastercard	Visa	MyDebit	02	05	15	01	06	16	00	07	17
Mastercard	Visa	MyDebit													
02	05	15													
01	06	16													
00	07	17													
Cryptogram	ans{1..100}	C	Cryptogram generated using EMV-based cryptography to secure the transaction. Submit this parameter for CAVV received from 3DS server for authentication purpose												
TOKEN_CRYPTOGRAM	ans{1..100}	C	Cryptogram generated using EMV-based cryptography to secure the transaction. Submit this parameter for TAVV/CAVV received from ApplePay, GooglePay, MDES & VTS												
LAST4	n{4}	C	Last 4 digit of the card number												
dsTransID	ans{1..100}	O	Directory server transactionID provided by 3D's server												
3DS_version	ans{1..10}	O	Mandatory if using own authentication service												
Method	a{1..10}	O	Display mode: web : PC browser mobile : Mobile phone browser app : Mobile app mini : Mini program												

			inwallet : In-wallet browser terminal : Terminal
OSType	a{1..10}	O	Submit this value if Method = mobile/app iOS Android
non_3DS	n{1}	C	Applicable to card processing via specific processor using specific currency for pre-approved partner only. Equal to 0 by default and 1 for non-3DS transaction
subMerchantID	ans{1..32}	C	Sub-merchant ID provided by PG
is_DDA	n{1}	C	Indicator for DirectDebit e-Mandate transaction. Valid values are:- 0 : Normal transaction (default) 1 : DirectDebit enrollment transaction (e-Mandate or DDA) 2 : DirectDebit modification transaction (e-Mandate or DDA) 3 : DirectDebit termination transaction (e-Mandate or DDA) Token upon successful enrollment is expected to be available on next working day, usually after 1000HRS via Callback URL. Please send in the maximum authorized amount for future debit instruction during enrollment via TxnAmount
BuyerIDNumber	an{20}	C	Buyer ID number (i.e. NRIC/Passport number) without special character. Please send together with BuyerIDType. Mandatory for DirectDebit e-Mandate (DDA or the enrollment transaction)
BuyerIDType	n{1}	C	ID identifier type of a buyer (i.e. NRIC/Passport No) or organization. Mandatory for DirectDebit e-Mandate (DDA or the enrollment transaction). Valid values are:- 1 : New IC Number 2 : Old IC Number 3 : Passport Number 4 : Business Registration
split_info	ans{1..200}	C	Used for "Alipay Split Payment". Values with pipe () as data delimiter and comma (,) as recipient separator as the format shown below without '<' and '>':- <Alipay_userID> <amount> <currency> <description>, <Alipay_userID> <amount> <currency> <description>
CashWaittime	n{1..2}	O	For cash payment only. To specify the transaction timeout, this will overwrite the default cash timeout setting. Eg. 12 [HOUR]
PaymentExpiration Time	a{20}	O	For non-cash payment only. A timestamp (ISO 8601) that determines when the requestURL will expire, in UTC. Eg. 2023-12-31T23:59:59Z
UserAgent	ans{1..200}	O	Developers may pass in the HTTP header User-Agent string from the client. This will help optimize the e-wallet In-App payment experience
AppDeeplink	ans{1..128}	O	Mobile deeplink/universal link that allows e-wallet In-App payment
mpstokenstatus	n{1}	C	A token status for PG to identify.

			1 : Request for new PG token 2 : Passing an existing PG token 3 : Merchant will be storing the card details/tokenizing for future use (Will not be tokenized through PG) 4 ; Merchant is passing a stored card number/token for payment.
MerchantInitiated	n{1}	O	Set the type of payment it is initiated by. By default, it is 0 (customer initiated) 0 : Customer initiated 1 : Merchant initiated
MerchantInitiatedReason	n{1}	C	Reason for the merchant initiated transaction or incremental authorization. 1 : Reauthorization / Partial Shipment
InstallMonth	n{1..2}	O	Total month of installment. E.g: 0, 3, 6, 12, 24
ProductDesc	ans{1..200}	O	To display the breakdown of items in the payment sheet. Values with pipe () as data delimiter and comma (,) as recipient separator as the format shown. (Only for Apple Pay) e.g. Label amount, label amount, label amount
CheckoutSource	ans{1..200}	O	Indicator of different type of checkout source made. Different checkout source may have different type of MDR calculation
OriginalTranID	ans{1..20}	O	The payment gateway transactionID from the 1st payment transaction required for its subsequent transactions. Mainly for RECURRING or UCOF type of transaction **Kindly append verificationID_ at the start of the value if the origin transaction was initiated from zero dollar verification API. Eg : verificationID_123
OriginalSchemeID	ans{1..100}	O	The scheme transactionID from the 1st payment transaction required for its subsequent transactions. Mainly for RECURRING or UCOF type of transaction
AuthCode	an{6}	O	Authorization code generated from the original authorized transaction. Optional when performing a standalone capture transaction
DisplayName	ans{1..50}	O	Merchant's doing business as shown on bank intermediate page or customer's bank statement
PreDiscountAmt	ns{10,2}	C	PreDiscountAmt is the original amount calculated before discount. TxnAmount will be used as the customer transacted amount/ discounted amt. If the value not empty, PreDiscountAmt will be used as the amount settled to merchants. Merchants can leverage this value for promotion purposes
GooglePay	array	C	The response of the whole Google Pay payload needs to be provided to the payment gateway to perform authorization
ApplePay	ans{1.300}	C	The response of the encrypted token from Apple Pay needs to be provided to the payment gateway to perform authorization For direct app integration with Apple Pay. Need to pass in Method = app .
IcpMemberId	an(1..20)	O	Unique ID for TW ESUN channels. This value will be propagated and returned in extraP parameter

Fiuu ^ Powering Future Payments

TxnChannelExt

Channel	Key	Value	Description	Example
DRAGONPAY	mode	1 - OnlineBanking 2 - OTC & ATM 4 - OTC non-bank 8 - E-Wallets 32 - Paypal 64 - Credit Cards 128 - GCash 256 - Int'l OTC 512 - Bancnet 1024 - Auto-Debit 2048 - Cash-on-Delivery	Only show specific categories at Dragonpay hosted payment page. Values can be OR-ed to combine the effect.	mode:3 (means 1 OR 2 = 3)
ENETS-D		30 - DBS Bank 31 - United Overseas Bank 120 - OCBC Bank 123 - Standard Chartered Bank	Additional Parameter for ENETS-D channel redirect to preferred bank page.	

Payment Response Parameters (PG to Merchant)

Payment gateway will return a response in json format to the merchant. Please take note that this is NOT the payment status result.

No	Field Name	Data Type (Size)	M/O/C	Description
1.	MerchantID	ans{1..32}	M	Merchant ID provided by PG
2.	ReferenceNo	ans{1..32}	M	Merchant Unique Transaction / Order / Billing / Reference No.
3.	TxnType	a{4}	M	SALS or AUTS
3.	TxnID	ans{1..100}	M	PG Transaction ID.
4.	TxnChannel	ans{0..30}	M	Channel (Refer to Appendix B for channel)
5.	TxnCurrency	a{3}	M	ISO4217 currency code, eg. "MYR", "THB", "IDR"
6.	TxnAmount	ns{10,2}	M	Transaction amount eg."1.00", always 2 decimal points
7.	TxnData	array	M	Refer to TxnData below.
8.	payTxnID	n{7}	C	Truncated TxnID applicable for 7-eleven only.
9.	param_extend		C	Only appears when using VTC-Pay

TxnData

No	Field Name	Data Type (Size)	M/O/C	Description
1	<u>RequestURL</u>	ans{1..255}	M	URL to be REDIRECT or POPUP
2	<u>RequestMethod</u>	a{3..4}	M	Action method [GET/POST]
3	<u>RequestType</u>	a{5..8}	M	Recommended action [REDIRECT/POPUP/RESPONSE]
4	<u>RequestData</u>	JSON Object	M	Data to be submitted to the <u>RequestURL</u>

Note: RequestType **RESPONSE** is the final result of that payment and no further action required.

Refer below for sample response TxnData.

SAMPLE - Payment Response

The screenshot displays the Postman interface with a POST request to `https://www.onlinepayment.com.my/MOLPay/API/seamlesspaymentIndex.php`. The request is configured with the following form data:

Key	Value
MerchantID	MOLPayRND
ReferenceNo	DEMO123
TxnChannel	cimb
TxnCurrency	MYR
TxnAmount	100.00
Signature	fcb25388941d83ddeb3ce0315f0853
TxnType	SALS
Key	Value

The response status is 200 OK with a response time of 211 ms. The response body is shown in JSON format:

```
1 {
2   "MerchantID": "MOLPayRND",
3   "ReferenceNo": "DEMO123",
4   "TxnID": "4920269",
5   "TxnType": "SALS",
6   "TxnCurrency": "MYR",
7   "TxnAmount": "100.00",
8   "TxnChannel": "cimb",
9   "TxnData": {
10    "RequestURL": "https://www.cimbclicks.com.my/TIRSPWeb/ePayment.do",
11    "RequestMethod": "POST",
12    "RequestType": "REDIRECT",
13    "RequestData": {
14      "payeeId": "TBNOLPAYEPAY",
15      "amount": "100.00",
16      "billAccountNo": "4920269",
17      "billReferenceNo": "DEMO123",
18      "billReference2": "5a6d5906",
19      "billRef3": "",
20      "billRef4": ""
21    },
22    "payeeResponseURL": "https://www.onlinepayment.com.my/MOLPay/cimb/return_cimb.php"
23  }
24 }
```

ERROR CODES

Please refer to API Spec for Merchant (section ERROR CODES)

Payment Status Notification

Please refer to the same section name in the official API document. Merchants will need to implement at least 2 endpoints (*notification URL* and *callback URL*, both with **IPN** or ACK function). Tokenized card/DDA data will be returned in **extraP** parameter.

WARNING: Please note that multiple payment notifications (either from *return URL*, *notification URL* or *callback URL*) for a single transaction is possible but this does not mean that the buyer has paid twice or multiple times. Kindly ensure the **IDEMPOTENT** of your **API** design.

Enabling Apple Pay

Requirements

- 1) Merchant needs to create a directory path called **.well-known**. Download and place the file ([apple-developer-merchantid-domain-association](#)) at the following directory
 - a) Request the file from our operation team support@fiuu.com
 - b) Download from merchant portal: [Fiuu Merchant Portal Version 2.0 : Profile Settings](#)
 - c) Download from github: [GitHub - Fiuu/Apple-Pay-for-Malaysia-and-Singapore](#)
- 2) Kindly do not alter the filename and follow the following path example:
<https://www.example.com/.well-known/apple-developer-merchantid-domain-association>
- 3) Apple will verify the following path in order for us to successfully onboard you as a merchant
- 4) Kindly check with operation that your merchantID has already been onboarded and enabled to use Apple Pay
- 5) Follow the example below to begin an Apple Pay session by including the necessary JavaScript library and HTML attributes
 - a) Must include these JS files
 - i) <https://applepay.cdn-apple.com/jsapi/v1/apple-pay-sdk.js>
 - ii) <https://pay.fiuu.com/RMS/ApplePay/xdk.js>
 - b) Refer here this section for the available parameters to create a payment request.
- 6) Apple Pay is only accepted in iOS applications in iOS 10 and above, and on the web in Safari starting with iOS 10 or macOS Sierra

Examples

Frontend example to display the Apple Pay button

```
<?php

// vcode formula
$vcodes = md5( $amount.$merchantID.$orderid.$verifykey );

// output of the vcode based on above information equals to :
$vcodes = "xxxxxxxxxx";

// Include the request parameters that is needed only
$paymentData = array(
    "MerchantID" => "TesterID",
    "ReferenceNo" => "TestingOrder123",
    "TxnType" => "SALS",
    "TxnCurrency" => "MYR",
    "TxnAmount" => "1.10",
    "CustName" => "TESTER",
    "CustEmail" => "TESTER@gmail.com",
    "CustContact" => "601532576316",
    "CustDesc" => "Payment for testing TestingOrder123",
    "Signature" => $vcodes,
    "ReturnURL" => "https://xxx.com/return",
    "NotificationURL" => "https://xxx.com/notification",
    "CallbackURL" => "https://xxx.com/callback",
);

?>

<script src="https://applepay.cdn-apple.com/jsapi/v1/apple-pay-sdk.js"></script>
<script src="https://pay.fiuu.com/RMS/ApplePay/xdk.js"></script>

<style>
apple-pay-button {
    --apple-pay-button-width: 240px;
    --apple-pay-button-height: 40px;
    --apple-pay-button-border-radius: 3px;
    --apple-pay-button-padding: 0px 0px;
    --apple-pay-button-box-sizing: border-box;
}
</style>

<script type="text/javascript">

if (window.ApplePaySession) {
    var merchantIdentifier = 'merchant.comrazermerchant.pay';
```

```

var promise = ApplePaySession.canMakePaymentsWithActiveCard(merchantIdentifier);

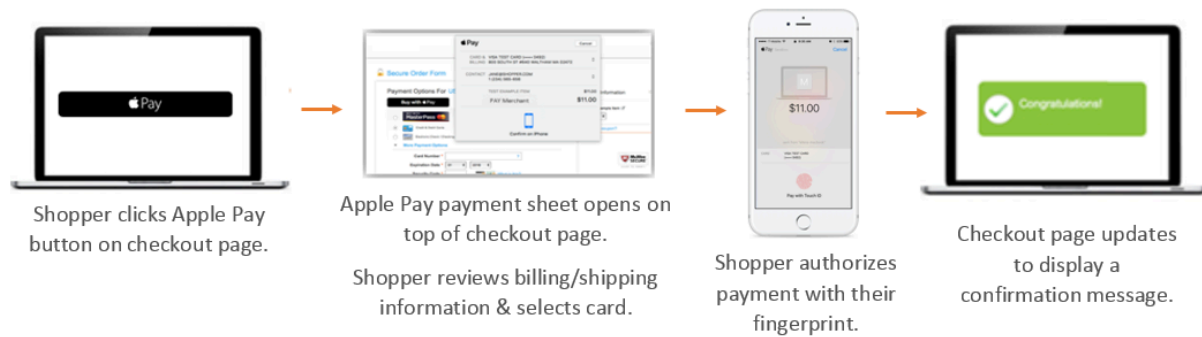

promise.then(function (canMakePayments) {

    // Append parameters that is needed only
    $("div#applepaybutton").append(
        "<apple-pay-button buttonstyle='black' type='plain' locale='en'

<div class='row' align='center' id='applepaybutton'>
</div>

```

Steps

- 1) Upon successful *ApplePaySession.canMakePayments* call, the Apple Pay button will be displayed.
- 2) Once a user clicks on the Apple Pay button, *makePayment* function will be triggered. User will be authenticated and at the same time merchant validation will take place at the backend.
- 3) After a successful user authentication, a payment authorization will take place via the payment request endpoint.
- 4) Payment sheet will display a success or fail message based on the response of the authorization.
- 5) User will be redirected back to the merchant's return page once the payment sheet closes.

Enabling Google Pay

Requirements

Kindly reach out to our support for the requirement on enabling Google Pay on your website as there's documents required by Google to verify your website before allowing Google Pay to be displayed at your side.

Examples

Frontend example to display the Google Pay button

```
<?php

// vcode formula
$vcodes = md5( $amount.$merchantID.$orderid.$verifykey );

// output of the vcode based on above information equals to :
$vcodes = "xxxxxxxxxx";

// Include the request parameters that is needed only
$paymentData =array(
    "MerchantID" => "TesterID",
    "ReferenceNo" => "TestingOrder123",
    "TxnType" => "SALS",
    "TxnCurrency" => "MYR",
    "TxnAmount" => "1.10",
    "CustName" => "TESTER",
    "CustEmail" => "TESTER@gmail.com",
    "CustContact" => "601532576316",
    "CustDesc" => "Payment for testing TestingOrder123",
    "Signature" => $vcodes,
    "ReturnURL" => "https://xxx.com/return",
    "NotificationURL" => "https://xxx.com/notification",
    "CallbackURL" => "https://xxx.com/callback",
);

?>

<script src="https://pay.google.com/gp/p/js/pay.js"></script>
<script src="https://pay.fiuu.com/RMS/GooglePay/xdk.js"></script>

<script type="text/javascript">

Card data encryption

A sample below on how to perform encryption on card parameter such as CC_PAN, CC_CVV2, CC_MONTH, CC_YEAR, CRYPTOGRAM, CC_TOKEN. This approach requires your entity and IT infrastructure to be PCI-DSS compliant since you are handling cardholder data (CDE or cardholder data environment).

Examples

```

<?php

$key = "-----BEGIN PUBLIC KEY-----
MIIBIjANBgkqhkiG9w0BAQEFAAOCAQ8AMIIBCgKCAQEAxXAZm7omKp4F6xRB7fcC
Zkn0Xloeevu9BsTQtN8KahVZdVCAQkQWbLfu5UwARf5xXtoTr/i9Se9vAf81HbnM
vDBathot.JSZhknZLbNqwJZT7JiFqx+UKeK7BJqslQWc7b+dtHpsE4U5ezjkxfZ5u
FEUsVZ8evrPUgfnJhud7r9C2EXm+Z4h6xIhyhhYXVq+QeXpGg1T5ZJ3lp1FaAP+C

Ha0UJDv3g4XnnZYqJf4UhQmvmzKitBSp1FK0tu4E+OoDZfc+py7C6H9Q+5VDZWEd
0QIDAQAB
-----END PUBLIC KEY-----";

// Input that you want to encrypt with
$CC_PAN = "4111111111111111";

openssl_public_encrypt($CC_PAN, $encrypted, $key);

// An encrypted value that you will send for a payment request. ENC_CARD is an identifier for PG
to know that the value is encrypted for the card data you're passing.
$CC_PAN = "ENC_CARD_".base64_encode($encrypted);

```

Appendix A : Data Type Details

No	Code	Description
1	a	Letter, A-Za-z
2	n	Numbers, 0-9
3	s	Symbols and space, .: ?*,!&_-
4	{x}	Fixed length x
5	{y..x}	Length range: y – x
6	{y,x}	Number range: 0-9. 0-9
7	array	JSON array

Appendix B : M/O Details

No	Code	Description
1	M	Mandatory field.
2	O	Optional field.
3	C	Conditional field.
