# Authentication Request

Production URL: <https://pay.merchant.razer.com/RMS/API/Card/authentication.php>

Merchant can perform standalone authentication if you have your own authorization service. This integration helps to authenticate online transactions with the EMV 3DS protocol. Our authentication product is regularly maintained and is inline with the regular 3DS protocol updates. This ensure that merchant does not need to handle any differences between local and global schemes requirement to perform a successful authorization.

HTTP Method: **POST**

| Parameter Name | Data Type (Size) | M/O/C | Description   |
|----------------|------------------|-------|---|
| MerchantID     | ans{1..32}       | M     | Merchant ID provided by PG  |
| ReferenceNo    | ans{1..40}       | M     | Merchant Unique Transaction / Order / Billing / Reference No.   |
| TxnAmount      | ns{10,2}         | M     | Transaction amount or maximum DirectDebit amount eg."1.00", 2 decimal points only and comma( , ) is not allowed.  |
| TxnCurrency    | a{3}             | M     | ISO4217 currency code, eg. "MYR", "THB", "IDR"  |
| CustName       | ans(1..128)      | O     | Customer name   |
| CustEmail      | ans(1..128)      | O     | Customer email.   |
| CustContact    | ans(1..32)       | O     | Customer contact no   |
| CustDesc       | ans{1..200}      | O     | Customer/Merchant description   |
| Signature      | ans(1..100)      | M     | <b>HMAC_SHA256</b> (TxnAmount. MerchantID. ReferenceNo.TxnCurrency, Verifykey)<br><br>*Do not include full stop in the hash calculation.It is just to indicate the different values needed to calculate the hash. |
| ReturnURL      | ans{1..200}      | M     | Merchant's authentication response page   |
| CallbackURL    | ans{1..200}      | O     | Merchant's callback URL endpoint  |
| CC_PAN         | n{15..16}        | M     | The 16-digit shown on the card.   |

|            |           |   |   |
|------------|-----------|---|---|
| CC_CVV2    | n{3..4}   | O | Card verification code. 3 digits except for Amex (4 digits) |
| CC_MONTH   | n{2}      | M | Card expiry month   |
| CC_YEAR    | n{4}      | M | Card expiry year  |
| CC_TOKEN   | n{16}     | O | Token for credit card or DPAN                               |
| TOKEN_TYPE | a{1...20} | C | GooglePay, MDES, VTS  |

# Authentication Response

Payment gateway will return a response in **JSON** format to the merchant. Please take note that this is NOT the authentication status result.

| No | Field Name  | Data Type (Size) | M/O/C | Description  |
|----|-------------|------------------|-------|--|
| 1. | MerchantID  | ans{1..32}       | M     | Merchant ID provided by PG                                   |
| 2. | ReferenceNo | ans{1..32}       | M     | Merchant Unique Authentication Reference No.                 |
| 3. | AuthID      | ans{1..20}       | M     | PG Authentication ID.  |
| 5. | TxnCurrency | a{3}             | M     | ISO4217 currency code, eg. "MYR", "THB", "IDR"               |
| 6. | TxnAmount   | ns{10,2}         | M     | Transaction amount eg."1.00", always <b>2 decimal points</b> |
| 7. | TxnData     | array            | M     | Refer to TxnData below.                                      |

## TxnData

| No | Field Name           | Data Type (Size) | M/O/C | Description  |
|----|----------------------|------------------|-------|--|
| 1  | <u>RequestURL</u>    | ans{1..255}      | M     | URL to be <b>REDIRECTED</b>                              |
| 2  | <u>RequestMethod</u> | a{3..4}          | M     | Action method [ <b>GET/POST</b> ]                        |
| 3  | <u>RequestType</u>   | a{5..8}          | M     | Recommended action<br>[ <b>REDIRECT/POPUP/RESPONSE</b> ] |
| 4  | <u>RequestData</u>   | array            | M     | Data to be submitted to the <u>RequestURL</u>            |

Note: RequestType **RESPONSE** is the final result of that payment and no further action required.

## Final Authentication Response

The parameter responded will be in **HTTP POST** method, not in JSON format. Authentication response will be returned upon complete authentication journey up till merchant's return page. May refer to section [Authentication Query Response](#) for the authentication response format.

# Authentication Query Request

Production URL: [https://api.merchant.razer.com/RMS/API/Card/authn\\_query.php](https://api.merchant.razer.com/RMS/API/Card/authn_query.php)

This request is to query the authentication result that was performed.

Either AuthenticationID or ReferenceNo must be passed in order to obtain the authentication query result else it will be rejected.

HTTP Method: **POST** or **GET**

| Parameter Name   | Data Type (Size) | M/O/C | Description   |
|------------------|------------------|-------|---|
| MerchantID       | ans{1..32}       | M     | Merchant ID provided by PG  |
| AuthenticationID | ans{1..20}       | C     | The authenticationID provided after the authentication was performed.           |
| ReferenceNo      | ans{1..40}       | C     | ReferenceNo used during the authentication request.                             |
| DateTime         | n{14}            | M     | Request date & time, e.g. 20161202153423 (YYYYMMDDHHmmss)                       |
| Signature        | ans(1..100)      | M     | <b>HMAC_SHA256</b> (Datetime.MerchantID.AuthenticationID.ReferenceNo.Verifykey) |

# Authentication Query Response

Payment gateway will return a response in JSON format to the merchant.

| Parameter Name   | Data Type (Size) | M/O/C | Description  |
|------------------|------------------|-------|--|
| AuthenticationID | ans{1..20}       | M     | AuthenticationID assigned by Acquirer  |
| MerchantID       | ans{1..32}       | M     | Merchant ID provided by PG   |
| ReferenceNo      | ans{1..40}       | M     | A reference number for merchant to refer to the request made   |
| TxnCurrency      | a{3}             | M     | ISO4217 currency code, eg. "MYR", "THB", "IDR"   |
| TxnAmount        | ns{10,2}         | M     | Transaction amount or maximum DirectDebit amount eg."1.00", 2 decimal points only and comma( , ) is not allowed. |
| status           | ans{2}           | M     | 00 - Success authentication  |

|                      |              |         |  |            |      |         |    |    |    |    |    |    |    |    |    |
|----------------------|--------------|---------|--|------------|------|---------|----|----|----|----|----|----|----|----|----|
|                      |              |         | 11 - Failed authentication<br><br>22 - Pending authentication  |            |      |         |    |    |    |    |    |    |    |    |    |
| error_code           | ans{1..10}   | C       | Error code for the failed verification.  |            |      |         |    |    |    |    |    |    |    |    |    |
| error_desc           | ans{1..100}  | C       | Detailed explanation for the failed verification.  |            |      |         |    |    |    |    |    |    |    |    |    |
| dsTranID             | ans{20..50}  | C       | Directory server transaction ID provided by 3D's server  |            |      |         |    |    |    |    |    |    |    |    |    |
| threeDSServerTransID | ans{20..50}  | C       | 3D's server ID generated during authentication request to DS   |            |      |         |    |    |    |    |    |    |    |    |    |
| ECI                  | ans{2}       | C       | <p>Electronic Commerce Indicator (ECI) is a value returned by Directory Servers (namely Visa, MasterCard, MyDebit, JCB, and American Express) indicating the outcome of authentication attempted on transactions enforced by 3DS.</p> <p>Eg :</p> <table><tr><td>Mastercard</td><td>Visa</td><td>MyDebit</td></tr><tr><td>02</td><td>05</td><td>15</td></tr><tr><td>01</td><td>06</td><td>16</td></tr><tr><td>00</td><td>07</td><td>17</td></tr></table> | Mastercard | Visa | MyDebit | 02 | 05 | 15 | 01 | 06 | 16 | 00 | 07 | 17 |
| Mastercard           | Visa         | MyDebit |  |            |      |         |    |    |    |    |    |    |    |    |    |
| 02                   | 05           | 15      |  |            |      |         |    |    |    |    |    |    |    |    |    |
| 01                   | 06           | 16      |  |            |      |         |    |    |    |    |    |    |    |    |    |
| 00                   | 07           | 17      |  |            |      |         |    |    |    |    |    |    |    |    |    |
| cryptogram           | ans{10..100} | C       | Base64 encoded cryptographic identifier (CAVV) used by the card schemes to validate the cardholder authentication result.  |            |      |         |    |    |    |    |    |    |    |    |    |
| version              | ans{1..5}    | C       | The version of 3D Secure used to authenticate the request.   |            |      |         |    |    |    |    |    |    |    |    |    |
| cclast4              | ans{4}       | M       | Last 4 digit of the cardnumber   |            |      |         |    |    |    |    |    |    |    |    |    |
| flowType             | as{1..20}    | C       | Indicates whether the 3D Secure authentication was challenged or frictionless <ul style="list-style-type: none"><li>- challenge</li><li>- frictionless</li></ul>   |            |      |         |    |    |    |    |    |    |    |    |    |

|              |             |   |   |
|--------------|-------------|---|---|
| responseTime | ans{18}     | M | Date/Time of the authentication request completed<br>(YYYY-MM-DD HH:mm:ss)  |
| skey         | ans{1..100} | M | <b>HMAC_SHA256</b> (AuthenticationID . MerchantID . ReferenceNo .<br>TxnCurrency . # Zero Dollar Verification Request

Production URL: [https://pay.merchant.razer.com/RMS/API/Card/cc\\_verification.php](https://pay.merchant.razer.com/RMS/API/Card/cc_verification.php)

Card verification is a strong first-line defense against potentially fraudulent cards. It ensures that the credit card number provided is associated with a valid, open account and can be tokenized and charged with a higher success rate. Cardholder will not be charged and won't see any billings on their financial statement.

HTTP Method: **POST**

| Parameter Name | Data Type (Size) | M/O/C | Description  |
|----------------|------------------|-------|--|
| MerchantID     | ans{1..32}       | M     | Merchant ID provided by PG   |
| TxnChannel     | ans{1..30}       | M     | Refer to <b>Direct Server API (Appendix C )</b> for channel value  |
| ReferenceNo    | ans{1..40}       | M     | A reference number for merchant to refer to the request made   |
| TxnCurrency    | a{3}             | M     | ISO4217 currency code, eg. "MYR", "THB", "IDR"   |
| Signature      | ans{1..100}      | M     | <b>HMAC_SHA256</b> (TxnCurrency.MerchantID.ReferenceNo, Verifykey)<br><br>*Do not include full stop in the hash calculation. It is just to indicate the different values needed to calculate the hash. |
| CC_PAN         | n{15..16}        | O     | The 16-digit shown on the card.  |
| CC_TOKEN       | ans{16..50}      | O     | Token for credit card or DPAN  |
| CC_CVV2        | n{3..4}          | O     | Card verification code. 3 digits except for Amex (4 digits)  |
| CC_MONTH       | n{2}             | M     | Card expiry month  |
| CC_YEAR        | n{4}             | M     | Card expiry year   |
| CustName       | ans{1..128}      | O     | The customer's name  |
| CustEmail      | ans{1..128}      | O     | The customer's email address   |
| CustContact    | ans{1..32}       | O     | The customer's phone number.   |

|                |              |   |  |            |      |    |    |    |    |    |    |
|----------------|--------------|---|--|------------|------|----|----|----|----|----|----|
| TOKEN_TYPE     | a{1..20}     | O | GooglePay,ApplePay,MDES,VTS  |            |      |    |    |    |    |    |    |
| ECI            | ans{2}       | C | <div>Electronic Commerce Indicator (ECI) is a value returned by Directory Servers (namely Visa, MasterCard, JCB, and American Express) indicating the outcome of authentication attempted on transactions enforced by 3DS.</div> <div>Eg :</div> <table><tr><td>Mastercard</td><td>Visa</td></tr><tr><td>02</td><td>05</td></tr><tr><td>01</td><td>06</td></tr><tr><td>00</td><td>07</td></tr></table> | Mastercard | Visa | 02 | 05 | 01 | 06 | 00 | 07 |
| Mastercard     | Visa         |   |  |            |      |    |    |    |    |    |    |
| 02             | 05           |   |  |            |      |    |    |    |    |    |    |
| 01             | 06           |   |  |            |      |    |    |    |    |    |    |

### **TxnData**

| Parameter Name | Data Type (Size) | M/O/C | Description                                   |
|----------------|------------------|-------|---|
| RequestURL     | ans{1..255}      | M     | URL to be <b>REDIRECT</b> .                   |
| RequestMethod  | a{3..4}          | M     | Action method [ <b>GET/POST</b> ]             |
| RequestType    | a{5..8}          | M     | Recommended action<br><br>[ <b>REDIRECT</b> ] |
| RequestData    | array            | M     | Data to be submitted to <u>RequestURL</u> .   |

### **Final Verification Response**

The parameter responded will be in **HTTP POST** method, not in JSON format. Verification response will be returned upon complete verification journey up till merchant's return page. May refer to section [Zero Dollar Verification Response](#) for the verification response format.

## Installment Tenure Request

Production URL:

<https://pay.merchant.razer.com/RMS/API/Installment/getEnableInstlChn.php>

Use to get the channel name, installment tenure and minimum transaction amount based on card number and transaction amount provided by the merchant.

HTTP Method: **POST**

| Parameter Name | Data Type (Size) | M/O/C | Description   |
|----------------|------------------|-------|---|
| MerchantID     | ans{1..32}       | M     | Merchant ID provided by PG  |
| CC_PAN         | ans{64}          | M     | Encrypted 16-digit shown on the card.   |
| CC_MONTH       | ans{64}          | M     | Encrypted card's expiry month, e.g. 03.   |
| CC_YEAR        | ans{64}          | M     | Encrypted card's expiry year, e.g. 2023.  |
| TxnAmt         | ns{10,2}         | M     | Transaction amount. Eg. "1.00", 2 decimal points only and comma ( , ) is not allowed.           |
| DateTime       | n{14}            | M     | Request date & time, e.g. 20161202153423 (YYYYMMDDHHmmss)                                       |
| Signature      | ans{1..100}      | M     | <b>HMAC_SHA256</b> ( MerchantID . CC_Pan . CC_Month . CC_Year . TxnAmt . DateTime . verify_key) |

## Installment Tenure Response

| Parameter Name | Data Type (Size) | M/O/C | Description  |
|----------------|------------------|-------|--|
| Status         | n{2}             | M     | 00 - Success response<br>11 - Failed response  |
| error_code     | an{5}            | C     | Error code for the failed verification, eg IP101   |
| error_desc     | ans{1..100}      | C     | Detailed explanation for the failed verification.  |
| MerchantID     | ans{1..32}       | C     | Merchant ID provided by PG   |
| Channel        | ans{1..40}       | C     | Channel name   |
| Issuer         | array            | C     | Issuer name  |
| InstlMthList   | ans{1..50}       | C     | Available plans for the given card number or merchant. Example: [{"InstlMonth":3,"InstlMinAmt":"150"}, {"InstlMonth":6,"InstlMinAmt":"500"} ..., {"InstlMonth":18,"InstlMinAmt":"1500"}] |
| Signature      | ans{1..100}      | C     | <b>HMAC_SHA256</b> (MerchantID . Channel . Issuer . InstlMthList . privateKey)   |

## Installment Tenure Error Code

| Error Code | Description                             |
|------------|---|
| IP101      | MerchantID is mandatory.                |
| IP102      | CC_PAN/CC_MONTH/CC_YEAR is mandatory.   |
| IP103      | TxnAmt is mandatory.                    |
| IP104      | DateTime is mandatory.                  |
| IP105      | Signature is mandatory.                 |
| IP106      | Invalid MerchantID.                     |
| IP107      | Invalid Signature.                      |
| IP108      | The card is expired.                    |
| IP109      | No eligible installment plan available. |
| IP110      | Card not eligible for installment plan. |

## Authentication Error Code

| Error Code | Description   |
|------------|---|
| 3001       | User Cancel Authentication Page                           |
| 3014       | Authentication Screen Timeout                             |
| 3019       | User Enter invalid OTP more than 3 times. Card No blocked |
| 3012       | User Submit Blocked or Inactive Card Number               |
| 4000       | Transaction has timeout                                   |
